

## PHENAKISTOSCOPE | 12 frame

The phenakistoscope was the first widespread animation device that created a fluent illusion of motion using persistence of vision. It is considered to be one of the first forms of moving media entertainment that paved the way for the future motion picture and film industry. Similar to a GIF animation, it can only show a short continuous loop. (Paraphrased from *Wikipedia*)

**Get phenakistoscope templates and see our film screening and festival schedules at [utahfilmcenter.org/UAF](http://utahfilmcenter.org/UAF)**

**Directions:** Add a bee, leaves and stems, or any other progressive animation in each frame or color the forest flowers. Blank templates are also available.
